

# Overnight Monitoring

## Emergency Clinicians

- Dr. Kristin Peterson
- Dr. Sarah Crozier
- Dr. Dan Lewer
- Dr. Emily Kalenius

Willamette Veterinary Hospital provides referring clinicians the service of basic overnight care and monitoring for stable patients that shouldn't go home but shouldn't be left alone in the clinic overnight.

The transfer packages include a DVM exam, hourly nursing care, administration of provided IV fluids, injections or prescriptions,

and additional analgesic treatment if necessary including injectables and or CRIs.

We welcome the opportunity to treat any and all patients overnight, and will discuss any alternative care options with you prior to transfer.

Our ambition is to provide care and monitoring over-

night and either transfer patients back to your hospital in the morning or send patients home with your individualized discharge instructions.

## RDVM Transfer Package:

• **\$241.75\***

\*Prices subject to change

## Urgent Care Services

We have a dedicated emergency clinician on site 7 days a week to manage hospitalized cases, take in referrals and see walk-in emergencies. Our ultrasound, surgical and blood product services are available to you 24/7. We have full in-house laboratory capability including coagulation panels, toxin screens and endocrine and electrolyte status.

Dr. Anna Wepprich

**24 hours a day, 7 days a week, 365 days a year**

# Blood Bank

We have a full line of both canine and feline blood products available. At all times we have canine whole blood, fresh frozen plasma, and packed red blood cells. We also have a faithful list of feline donors for whole blood to collect as needed. Coming soon to our stock will be feline fresh frozen plasma and canine cryoprecipitate along with platelet rich plasma. These services are available 24hr. Blood typing and cross-matching are performed prior to every transfusion.

## Available Blood Products

- Canine Whole Blood
- Canine Packed Red Blood Cells
- Canine Fresh Frozen Plasma
- Feline Whole Blood (direct from donor)

## Whole Blood pricing\*

- Canine \$337.00
- Feline \$295.75

# Ultrasound Services

Willamette Veterinary Hospital now offers in-house full abdominal ultrasound capabilities 24/7. With this modality, staging abdominal neoplasia, renal disease, IBD, and more has improved significantly. With STAT consultation turn around times under 4 hours, we are able to make timely medical decisions for some of our most critical patients. In addition, US-guided organ sampling has allowed us to increase our ability to provide etiologic diagnosis for numerous, neoplastic, splenic and hepatic diseases that previously remained uncertain.

# Laser Services

Class IV laser therapy is feline friendly!

## Deep Tissue Laser Therapy Uses:

- Wound healing
- Cystitis
- Degenerative Joint Disease
- Lick Granulomas
- Hip Dysplasia
- Gingivitis/Stomatitis
- Acute and Chronic Otitis

## Class IV Laser Therapy

- Reduce pain
- Reduce inflammation
- Speed healing

# Minimally Invasive Flank Gastropexy

Willamette Veterinary Hospital is excited to provide a Minimal Invasive Paracostal (Flank) Gastropexy + Neuter Package . The package includes the surgery (neuter+pexy), pre-anesthetic lab work, and all necessary medications (including go-home medications).

## Gastropexy + neuter

This procedure utilizes anatomic landmarks (right flank) to facilitate a direct approach, making a minimal invasive incision of about 5cm. This procedure is ideal to perform in combination with neuter based on surgical sites and size of incisions required. *Alternatively, this is a great stand-alone option for already altered males or females (stand-alone package \$750).*

## Benefits

The flank gastropexy benefits stem primarily from the location and size of surgery. The smaller incision size yields for decreased geographic inflammation and subsequent pain. The size also allows for decreased time under anesthesia. In addition to the traditional gastropexy prophylactic benefits, the Flank gastropexy provides a beneficial option for our at risk patients while decreasing the time and exposure into the abdomen.

Do you have an at-risk dog?

Please call or email to set up an exam to discuss further.

## Package Pricing

**\$999\***

## What's included:

Neuter +Pexy,  
Preanesthetic lab  
work, all necessary  
medications and  
prescriptions.
